

AMENDMENTS TO THE SPECIFICATION:

Please amend the paragraph beginning at page 1, line 21, as follows:

A web site can be viewed as a directed graph or digraph, with the servable content (i.e., the content that is able to be served) forming the nodes in the graph and directed links between the nodes corresponding to hypertext links within web pages of the site. A spider begins at one of the nodes in a web site, and then follows the links from that node to other nodes, and so on. The spider can perform whatever processing is desired for the nodes as it encounters them. In the case of a search engine spider, this involves indexing node content, but other spider types can be used to perform other tasks such as checking for broken hyperlinks or spell checking documents.
